Spomenka Lajtner, BSc (Chem. Eng.), specialist in medical biochemistry

OPINION

Your stool samples have been analysed in our laboratory. We are informing you that the faecal occult blood test results are **negative**.

A negative result means that we didn't trace any blood in your stool samples, therefore there is no need for any additional examination at the moment. You will be invited to take a new test in the Svit Programme two years after you've received the invitation in the current screening round.

Don't forget to show the laboratory test results to your general practitioner during your next appointment.

Regardless of the negative results, please pay attention if you notice any of the following problems:

- **visible blood in your stool,**
- **change in bowel movement,**
- **very thin stool,**
- **constipation followed by diarrhoea,**
- **severe, recurring or lasting abdominal pain,**
- **unplanned loss of body weight or other inexplicable problems.**

Should any of the abovementioned problems appear, consult your general practitioner and don't wait until the next Svit Programme invitation.

If you need any additional explanation or have any questions, call us at the Center Svit on 01/620-45-21, Monday to Friday between 9:00 AM and 2:00 PM, send us an email at svit@nijz.si or a fax to 01/620-45-29 or write us a letter. You can find out many interesting facts on the Svit Programme website at www.program-svit.si.

We kindly greet you in the hope you will respond to our next invitation.

The Svit Programme Team
